Hi Alan,

- You must have the basic backend infrastructure ready with a few unit tests that cover the basic functions implemented. I'm assuming you will not be able to host it since you do not have AWS Educated access yet.
- Burndown chart for sprint 0 is not required for milestone 1. Although, you should have the burndown chart setup and ready for your sprint 1 so that you just need to update it when the next sprint starts. This should be ready before milestone #1 submission.
- Yes, Sprint retro should be done. Although, I will be evaluating it in the next lab. But you need this to be done for milestone 1. The template for sprint retro can be found in the Week 2 materials. The sprint review is a meeting where you show the outcome of the sprint. To be honest, for sprint 0 it doesn't matter much, since I'm checking your content every week. But starting from sprint 1, the review meetings will be different where you show me your working features.
- As the AGME representative, it is too early to tell anything. I would hope you have the basic code ready so that your developers can start implementing the major user stories in the Sprint 1. I took a look at your Github and noticed you have not updated the Github with the link to your Task management board and Document Repo. It will lead to a deduction of marks if that is not done.

Hope that explains everything.

Subject: Questions for SEPT assignment

Hi Sachin,

I'm from group 5 of the Tuesday 2:30 lab class. Just had a few questions that we wanted clarifying for the assignment as we didn't have enough time to ask in the lab.

- Do we need to have any microservices up and running by milestone #1?
- Do we need to include a burndown chart of sprint 0 for milestone #1?
- Do we need to include a sprint review for our sprints and do we need to do a sprint review/retro for sprint #0? If so, do we need to follow a template?
- As you are the 'AGME representative' for the project, was there any specific you wanted us to include and which direction did you want the project to head in?

Thanks for your time.

Regards,

Alan L

Hi,

I did notice it. To be frank I thought things were back to normal before the semester break.

Good that you guys reached out now. What I would suggest is you guys plan your work around the four members and not have any critical tasks planned for Youssef.

You can work as a team of 4 members. That would be the best way to go.

And ensure you provide the contributions accordingly in SPARK PLUS.

Subject: SEPT assignment member issue

Hi Sachin,

I'm Alan from the Tuesday 2:30 lab, group-5. Not sure if you're the right person to contact but we are having concerns with one of our group members. You may not have noticed in our most recent lab since you were pressed for time but one of our group members, Youssef was missing. He hasn't joined any of our recent meetings and we actually haven't had any contact with him since before the semester break. I wanted to notify you about this and was wondering how we should proceed.

Regards,

Alan Lam s3436174
