

# Communications Proof Log - Milestone 2

**Note: Not all logs are shown, just where important clarification was needed. All other major communication was done through voice chat and documented in Scrum Meeting Logs**

## Daily Scrum 15/09/2020 - 21/09/2020

Where:

- FlightWish - Matthew Duong
- Exia - Alan Lam
- Hamed AK - Hamed A
- gav - Gaveen A

The screenshot shows a Slack interface for the #daily-scrum channel. The left sidebar lists text channels (#general, #daily-scrum) and voice channels (General). The main area displays a welcome message and a series of messages from FlightWish and Exia. FlightWish's messages include a welcome message, a daily stand-up for 16/09/2020, and a message about the booking system. Exia's messages include a message about unit testing and a message about integrating redux into the front end.

Welcome to #daily-scrum!

This is the start of the #daily-scrum channel.

FlightWish 15/09/2020

What did you work on yesterday?  
What did you/are going to work on today?  
What issues are blocking you? (about)  
(About time we actually used this channel)

FlightWish 15/09/2020

Worked on unit testing yesterday, worked on further documentation and unit testing today. Slight problems with the complexity in which a booking will take place, but getting there.

Exia 15/09/2020

I worked on a few unit tests yesterday. Today I worked on documentation and preparation for sprint 3. Currently trying to figure out integrating redux into front end features.

Exia pinned a message to this channel. See all the pins. 15/09/2020

16 September 2020

FlightWish 16/09/2020

=====

Daily Stand-up 16/09/2020

=====

What did you work on yesterday?  
What did you/are going to work on today?  
What issues are blocking you? (about)

Exia 16/09/2020

I worked on implementing redux into the front end and trying to refactor login functionality with redux. I will continue to work on integrating redux. Currently, I have redesigned the login page and whole the login works it does not store the state into redux

FlightWish 16/09/2020

Worked on the booking system for the backend yesterday, today I worked on more of the booking system of the backend and recently pushed up an (pretty much done) implementation of adding a booking. No issues currently as I am now brainstorming what else needs to be done to ensure front end integration goes smoothly.

The screenshot shows a Slack interface for the #daily-scrum channel. The left sidebar lists text channels (#general, #daily-scrum) and voice channels (General). The main area displays a series of messages from gav, FlightWish, Exia, and Hamed AK. FlightWish's messages include a daily stand-up for 17/09/2020 and a message about the booking system. Exia's message is about implementing redux into the front end. Hamed AK's message is about working on the dashboard. FlightWish's message is about the booking system and CircleCI.

gav 16/09/2020

Me and Hamed worked on frontend dashboard both yesterday and today, progress has been steady but we've had to learn react using tutorials due to insufficient react materials provided, progress has been good tho

17 September 2020

FlightWish 17/09/2020

Daily Stand-up 17/09/2020

=====

What did you work on yesterday?  
What did you/are going to work on today?  
What issues are blocking you?

Exia 17/09/2020

Yesterday I continued working on implementing redux into the front end. Today I managed to finish and implement a working log in functionality using redux so front end is now setup and ready to use redux for other functionalities. Currently no issues but I will be starting work on creating a booking front end feature.

FlightWish 17/09/2020

Yesterday I finished implementation of the backend-booking. Today I had plans to use continuous integration; however I unfortunately also ran into that admin problem - I sent a message to the forums like other groups so I hope Homy gets back to me promptly.

18 September 2020

gav 18/09/2020

Yesterday I worked on dashboard main page and learning more react, Today I worked more on the Main page of the dashboard and setting up Card components for Services with responsive CSS design. Steady progress but once again, lot of time had to go into learning how to work with React Design and CSS/Bootstrap.

Hamed AK 18/09/2020

Yesterday I worked on the dashboard, more research on react. Today I worked on the main customer home page and the dashboard with emphasis on implementing Card components for the customer services, as well as responsive design. Also more time spent on learning react and css. No major issues so far

20 September 2020

Daily Stand-up 20/09/2020

=====

What did you work on yesterday?  
What did you/are going to work on today?  
What issues are blocking you?

Worked on trying to get CircleCI doing the testing for backend. Managed to get it working today and pushed it to circleci-branch. Now all that's left to do, aside from more unit testing, is to figure out how to get it deployed on AWS.

21 September 2020

**Exia** Yesterday at 11:49  
 Yesterday I started on creating a booking page for new bookings to be sent to the backend. Today I worked on refactoring the front end code from Gav and Hamed into folders and integrating it into our current code. Although the code works, there are still some issues with the styling as some elements could not be used due to how the functionality was structured.

**gav** Yesterday at 17:16  
 Work done on 19th SEP: We pushed up a functional user dashboard onto the userDashboard branch on 19 September and we finally now have a functional user dashboard with working dashboard home page depicting Cards for services offered, a working side bar and navigation bar showing all the components as designed. Yesterday I worked on refining the dashboard more and started on the booking page react design and styling. Today we are working on the Integration branch after Alan managed to fix the merge conflicts and merge our work on userDashboard branch into the integration branch. We are working on getting the booking page design and css working as Alan works on the booking functionality, we aim to then merge the work and have a complete booking functionality.

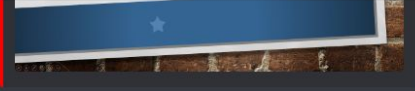

**Hamed AK** Yesterday at 17:51  
 Work done on September the 19th: Me and Gav pushed up a functional user dashboard onto userDashboard branch and we now have a functional user dashboard with working dashboard home page, a functional side bar and navigation bar showing all the components as designed. Yesterday I had a start on working on the booking page, on the styling and design level. Today I'll be working more on the booking page design and css styling.

**FlightWish** Yesterday at 21:57  
 =====  
 Daily Stand-up 21/09/2020  
 =====  
 (Different format since we had a scrum meeting)  
 What did you work on yesterday and/or today?  
 What are you going to work on for tomorrow's lab?  
 Yesterday I got CI working for the backend - In the form of CircleCI. Due to the lack of credits in RMIT-SEPT organisation, proof of working tests will be delivered via a personal repository cloning the latest-updated branch. I'm going to finish off unit testing for the backend, get a record of that with CircleCI and then move on to creating/collating all documentation needed for this Milestone's submission.

## Attempts to Communicate with Youssef H - 23/08/2020

Note: Youssef's username on Discord is @Anonysf

7.TUES-14.30-5 # general

**gav** 21/08/2020  
 Monday Consult with Homy, discuss Login service  
 👍 2  
 10:30am to 11am

**Hamed AK** 21/08/2020  
 I have put Homy's consultation times on the Canvas Home page, but here they are:  
 Monday 10:30 am to 11:00 am  
 Wednesday 7:30 pm to 8:30 pm  
 Friday 10 am to 10.30 am

**gav** 21/08/2020  
 Sunday 5 pm - Sprint Retro and review.

22 August 2020

**FlightWish** 22/08/2020  
 ok ngl guys I'm having some real trouble trying to get a dashboard kinda page working; as in I have almost no idea how to do so.

23 August 2020

**gav** 23/08/2020  
 Okay we'll discuss at the meeting today  
 Can everyone make it at 5pm ?  
 👍 2

**Exia** 23/08/2020  
 Sure

**gav** 23/08/2020  
 Hey @anonysf we're meeting now, join in if you can.

 **gav** 30/08/2020  
Yup okay

 **gav** 30/08/2020  
Hey Alan @Exia what time are you free tmr ?

 **Exia** 30/08/2020  
Yo, so I probably wont be free until night time  
Got appointment in the afternoon but i should be free anytime after 6 or 7

 **gav** 30/08/2020  
Okay  
Sounds good

31 August 2020

 **gav** 31/08/2020  
Dude I'm gonna be busy from 7:30  
So would be great if we could work from 6pm atleast

 **FlightWish** 31/08/2020  
btw @anonyf I figured out how get around having a JSON parsing thing for logging in.  
Turns out all you have to do is make a class that has variables you want passed in, so for example I made a LoginRequest class which simply has two string variables for user and pass  
and then I can use it just like in UserController, with @RequestMapping LoginRequest loginRequest and so on  
It also gets around the trouble of having incorrect parameters when doing get requests, since it should just simply give a simple error instead of flipping out

1 September 2020

 **Exia** 01/09/2020  
@FlightWish you reckon this looks alright?

```
Entity
public class Booking {
    #Id
    @GeneratedValue(strategy = GenerationType.IDENTITY)
    private Long bookingId;

    @Column(nullable = false)
    private String user;
    private Date time;
    @Column(nullable = false)
    private Date date;

    @ManyToOne(cascade = CascadeType.ALL) // what happens to parent entity will be applied to
    private User user;
    @ManyToOne(cascade = CascadeType.ALL)
    private User customer;

    private String service;
```

 **FlightWish** 01/09/2020  
ye sure I'll have a crack at it later today

 **FlightWish** 01/09/2020  
I finally pushed all the things I said I'd do to the branch and I think it's good enough to merge back into backend-dev; check out the pull request please  
👍 1

@everyone

 **Exia** 01/09/2020  
I approved it with a comment

2 September 2020

 **gav** 02/09/2020  
Hey guys is everyone free for a meeting tmr ?  
Evening  
Or afternoon whatever works

 **FlightWish** 02/09/2020  
anytime tomorrow

 **gav** 02/09/2020  
Yup what about @anonyf @Exia @Hamed AK

 **Hamed AK** 02/09/2020  
Yup anytime  
Im free all day

 **Exia** 02/09/2020  
Yeh I can

 **FlightWish** 02/09/2020  
@everyone reminder to please review the pull request as soon as you can. Once that is as final as can be I'm planning to merge it back to development and then update all the front end branches with it so I can actually test out the work Youssef did for logging in.

 **gav** 02/09/2020

Sure

Exia 17/09/2020

@everyone Ive finished implementing the login stuff with redux. It works atm so i created a pull request to integration branch as well. Review it please

@Hamed AK @gav After merge, make sure to branch off integration branch before integrating the work you guys have done

Exia 17/09/2020

@anonymsf Youssef are you able to join us for a meeting on saturday?

FlightWish 17/09/2020

your pull request is approved, I see no issues with it atm

Exia 17/09/2020

nice

make sure you install those packages to get it working

FlightWish 17/09/2020

ye im pretty sure I have them already, nothing abnormal happened when I ran it

phew

Exia 17/09/2020

cool

i think npm install just installs every npm package out there

thats why its so damn big

FlightWish 17/09/2020

I had suspicions that was the case haha

there was a ~~lot~~ ton of folders that didnt look like any important running config files or something

18 September 2020

Exia 18/09/2020

@everyone ive merged all the pull requests to integration-branch so it is the current most up to date branch

FlightWish 18/09/2020

Ayy nice one

FlightWish 18/09/2020

I just merged more stuff into integration so make sure to git fetch before you guys do anything else with it

Also how's evening sound for the meeting? I'll start somewhere between 7-8pm. in case you guys have any complications or something
