

Summary of New Features - Milestone 3

New User Stories

No new user stories have been created for this Milestone, as we already have an adequate amount of User Stories

New Functionality

Only some of the Front End user stories have been implemented from the Sprint Backlog for the most recent sprint.

- All functionality implemented has been done on the front-end
- Login / Logout
 - A functional logout button has been implemented. The login button directs the user to the login page, and after Login successfully, the login button changes to a 'Logout' button. This has been done with redux state management. On clicking the 'Logout' button, the user details are cleared from local storage and the redux state is cleared, and the user is successfully logged out.
- Feature complete Service Cards
 - The Service Card components have been updated to be context aware by integrating redux into the front end booking system, and thus upon click on one of the Service Cards, the booking service chosen is updated on redux.
- Updated Booking Page - Context Aware
 - The front end booking page has also been updated with integration of redux to make the booking page context aware. When a user clicks on the Service card for a particular service, the redux state for booking service is updated and the user is directed to a booking page which is customized for the chosen booking service.

New Files - Back End

- GetBookingsByUserRequest.java
 - Request class to hold information to be used by booking controller
 - Facilitates the required user information to search for booking
- BookingService.java
 - New displayUserBooking method utilised to search database for bookings related to user
- BookingController.java
 - For interface between the frontend and backend - initiates the search for bookings under the user details passed from the front end
- User.java
 - User model updated to contain a list for dates - used strictly for worker type users

New Files - Front End

Added new files in the following two folders

- Home folder
 - Contact.css
Details and styling for the Contact page
 - About.css
Details and styling for the About page
 - booking_new.css
Holds the new design of the booking page
- Image folder
 - spa2.jpg
 - trainer2.jpg
 - tutoring2.jpg
